

As ARRL Net Manager and MSYS Sysop of two Packet BBS's in Southern Indiana.. I must comment that this should not be allowed or at very least make it the primary responsibility of the PLC Providers to FIX any interference Problems or Shutdown. No exception.. Highly inforced by the FCC and its field offices.. We can not allow our communications to be hampered just for some new poteintally damaging technology just to provide Internet Access. There are viable alternatives for anyone wanting internet access.. Satelite... For one example.. They can be made cheaper if enough people were truely interested it would be like Cellphones.. Theyw ould give the equipment away to sell teh service and with enough patrons it could be had cheaper.
